Chicago, IL 60606-7206

RE: NL/TARA CORP SUPERFUND PROJECT

Per Your request, OHM Remediation Services Corp (OHM) is providing the following information as a preliminary estimate of lots that could require further remediation work for the above referenced project. OHM has considered many variables that could affect the overall number of lots as is detailed below.

- Estimated number of lots to remediate in the zone 1613
- Number of residential lots remaining in the zone after completion of Delivery Order No. 05 812

Δ: 801 + 100 = 901
40#5

Based upon factual information and estimated projections derived from project history, the following lots should be subtracted or added from the total lots remaining in the zone:

- Lots determined to require no further action by USEPA (108)
- Lots with denied access, estimated 13 will change in status (133)
- 75% of the 314 lots preliminarily determined to have lead levels below the clean-up criteria without final action yet determined will require no further action (235)

Total lots that may require lead clean-up work within the zone upon completion of Delivery Order No. 05 336

- Estimated number of lots to remediate in the buffer zone 238

NL/TARA Corp Superfund Project total lot estimate 574

(Next D.O say 600)

Respectfully
